First challenge on Windows:

1. Download & install Git from [git-scm.com](git-scm.com) (take all defaults)
2. Download & install Visual Studio Code from code.visualstudio.com
3. Open VS Code and start a terminal
4. Change the terminal to Git-Bash
5. Configure git by entering the following commands:
   a. git config --global user.name "Firstname Lastname"
   b. git config --global user.email "youremail@example.com"
6. Make a directory call Code
7. Within Code make a sub-directory called Challengedemo
8. Open Challengedemo within VS Code
9. Within Challengedemo initialize a git repository using git init
10. Create a small text file
11. Stage and commit the first commit.
12. Make an edit to your text file.
13. Stage and commit the change, explaining what has changed.
14. Explore the Git log to confirm the commit worked
15. Compare your last commit to your first.
